

# VORTRAN® Cuff Inflator (VCI)

Endotracheal Tube Inflator with Manometer, Model 2450

- An easy, accurate, and economical solution for intra-cuff pressure regulation.
- Measure and regulate the cuff of endotracheal tubes, tracheostomy tubes, and Laryngeal Mask Airways (LMAs).
- Multiple uses = cost effective solution compared to single use device

## 3 Easy Steps:

- 1) INSERT & PRIME immediately, pump 2x
- 2) ADJUST pressure by pumping/deflating
- 3) REMOVE immediately after each use

## Product Uses

- Use with low-pressure, high-volume cuffs
- Inflate, deflate, and regulate cuffed tubes
- For hospitals, EMS, extended care, and outpatient clinics

## Design Features

- Intuitive, ergonomic design
- Inflate by repeatedly pressing pump
- Easy-to-read, color-coded manometer
- No power required

## Compact Size

- Small, lightweight
- Can be conveniently carried on a keychain or lanyard
- Fits in your pocket

## Operational Characteristics

- Connects via ..... Luer fitting
- Volume delivered ..... Approximately 2 mL per pump
- Manometer range ..... 0 - 60 cm-H<sub>2</sub>O
- Accuracy of cuff pressure measurement ..... ± 3 cm-H<sub>2</sub>O within the typical operating range of 20 - 40 cm-H<sub>2</sub>O

Made in USA
